## Construction Update No. 2 Columbus School

Alastair Nicholl  
Skanska Project Manager  
Mob 07989 406251

### Welcome to the 2<sup>nd</sup> Skanska Construction Update on the re- development of Columbus School.

Skanska have worked closely with Columbus School to complete the new demountable classrooms which are now in full use by staff and children thus paving the way for the main works to proceed. With these early enablement works complete I would like to take this opportunity to thank our neighbours for their co-operation.

We now move forward to the exciting *Main Re-Development Works Phase 1* where we shall keep you informed of our progress and alert you to future site activity which we feel may be of interest. We advise that site establishment works are commencing together with the initial construction elements.

#### What is planned:

- Establishment of site hoarding within the School grounds.
- Removal of existing demountable class rooms.
- Reduce level excavations.
- Drainage and cable duct installations.
- Foundation construction.
- New footpath access crossover onto Oliver Way.

#### Considerations:

We shall carry out our works in such a manor to limit any impact on our neighbours and employ controls and methodology appropriate to this with Health, Safety and Environmental items being foremost.

We look forward to providing a quality teaching environment for Columbus School while forging good relations with our neighbours and we thank you for your ongoing and continued co-operation.
